

Choosing and Fitting Your HANS® Device It's easy to find the right HANS Device for you.

1. SEATBACK ANGLE

For comfort the HANS should match the angle of your seatback.

- **MODEL 10 - EXTREME UPRIGHT SEAT**
Fits some Sprint cars.
If you sit very upright and cannot get comfortable with a Model 20 try this Model.
- **MODEL 20 - UPRIGHT SEAT**
Fits all sedans including NASCAR, Busch, Sprint, Midget, Quarter Midget, Drag, Modified, Bandalero and similar. All sportscars including Porsche, BMW, Corvette, Honda, Viper etc. All Panoz Racing Series cars. Marine applications including UIM and Drag Boats.
- **NOTE:** Drivers over 200 lbs. may find a Model 30 more comfortable in vehicles like those listed above.
In all cases driver comfort is the deciding factor.
- **MODEL 30 - SEMI RECLINED SEAT**
Fits Formula Mazda, Atlantic, Infiniti Pro, Barber Dodge, IRL, C/D Sports Racer, Formula 1 and similar.
- **MODEL 40 - RECLINED SEAT**
The Model 40 is a rare application and fits extremely reclined seats such as Vintage Formula Ford.
Many people who buy a Model 40 return it for a Model 30. Please measure your seat (use an angle meter available at DIY-type stores) before ordering.

2. NECKSIZE

The width of the HANS Device collar is sized to fit your neck or shirt collar size.

- Under 12 Inches - Size Extra Small (XS) (For people under 100 lbs.)
- 12 to 14.5 Inches - Size Small (S)
- 15 to 17.5 Inches - Size Medium (M)
- Over 18 Inches - Size Large (L)
- So a person with a 16" neck driving a Corvette would use a HANS 20M.
It's as easy as that!

3. HELMET ANCHOR INSTALLATION

The HANS Device attaches to your helmet via two metal anchors. 90% of our customers install their own anchors - all you need is a 1/4 inch drill and measuring tape. Devices come with instructions plus a special installation tool. If you prefer we will install the anchors for you as an extra cost option. Please select this service in Parts and Accessories to let us know you prefer this.

4. PROFESSIONAL SERIES and EXTRA SERIES

Some models are available in lightweight (Professional) and regular (Extra) series. NOTE: Extra formerly called Economy.

The only difference is weight - about 6 - 8 ounces depending on size. There is no performance difference between the series.
